(54) Title: A TOY BUILDING SET WITH A VIBRATOR SENSOR

(57) Abstract: A building set comprising building elements with coupling means for interconnection of building elements, wherein the building set comprises a vibrator building element with a device for generating vibrations and with coupling means for interconnection with the remaining building elements of the building set, wherein the coupling means are the only interface for outputting generated vibrations. The building set also comprises a sensor building element, and by the building set structures can be built for illustrating the propagation of vibrations through solid structures. Thus, the building set can be used both as a toy and for teaching purposes.
